Profile

Software Engineer with hands-on experience in backend and web application development, specializing in REST API development, relational database design, system architecture, and production deployment. Experienced in building applications with Go, Laravel, Express.js, PostgreSQL, and MySQL, with practical experience in Docker, Linux-based VPS deployment, API integration, database optimization, testing, and scalable backend developments.

Education

Institut Teknologi Sumatera (ITERA)

Bachelor of Informatics Engineering (Computer Science) | GPA: 3.60/4.00

August 2022 – August 2026

Experience

HISSA Syariah Saham Indonesia

Fullstack Engineer Intern

June 2026 - Present

- Developed REST APIs and backend modules using Laravel and PostgreSQL for authentication, course management, learning progress tracking, quizzes, and certificate verification.
- Built data-processing APIs for a stock-market analytics dashboard with server-side filtering, pagination, aggregation, and structured responses for frontend visualization.
- Designed a three-tier architecture and normalized PostgreSQL schema to separate presentation, business logic, and data-access responsibilities, while documenting the APIs.

Institut Teknologi Sumatera (ITERA)

Database Practicum Assistant

February 2026 - May 2026

- Guided 60+ students through eight hands-on PostgreSQL practicum sessions, helping them apply SQL queries, joins, constraints, normalization, and relational modeling in database exercises.
- Reviewed database assignments and exercises across eight practicum sessions, identifying SQL and schema-design issues and providing targeted recommendations for correction.
- Helped students diagnose and resolve SQL syntax, query logic, normalization, and relational modeling issues throughout a four-month academic term.

Institut Teknologi Sumatera (ITERA)

Lecturer Assistant – Kapita Selekt

September 2025 - November 2025

- Supervised seven student teams from requirements analysis through final evaluation, helping each team translate project requirements into implementable system designs and deliverables.
- Reviewed database models, system designs, and implementation progress over three months, identifying design inconsistencies and development gaps before final evaluation.
- Provided technical feedback on application architecture, database design, and feature implementation to keep seven student projects aligned with academic and stakeholder requirements

Public Relations Office of Institut Teknologi Sumatera (ITERA)

Backend Developer Intern

July 2025 - August 2025

- Developed Laravel backend modules for managing public information, institutional documents, and administrative content, replacing fragmented manual workflows with a centralized web-based system.
- Replaced a difficult-to-maintain legacy system with a Laravel and MySQL-based application featuring an administrator panel for easier content and data management.
- Improved maintainability by separating administrative workflows, application logic, and relational data structures into a more structured system.

Institut Teknologi Sumatera (ITERA)

Introduction to Computers and Software Course Assistant

February 2024 - May 2024

- Delivered C++ programming practicums covering fundamental programming concepts, control flow, functions, debugging, and basic problem-solving.

Projects

Final Project | Institut Teknologi Sumatera

Web-Based Examination System - SMA IT Fitrah Insani Bandar Lampung

December 2025 - March 2026

- Built a Go, React.js with TypeScript, and PostgreSQL-based examination system that supported concurrent exam sessions for 25 students and 5 teachers without downtime.
- Containerized and deployed the application using Docker on an Ubuntu VPS, while improving the usability score from 60 on the previous system to 71.88 on the newly developed platform based on system usability scale.
- Implemented a more consistent question import workflow for managing 50+ questions per import while reducing data inconsistencies found in the previous system.
- Performed load testing in a staging environment to validate API performance, system stability, and concurrent exam execution before production deployment.

Green Education Information System for Banjar Agung Village, South Lampung

Team Lead & Backend Developer

September 2024 - December 2024

- Led an eight-member team by assigning tasks based on individual responsibilities, monitoring project progress, and coordinating development to ensure delivery within three months.
- Reviewed technical progress and aligned frontend, backend, and project requirements to reduce implementation gaps and keep the team on schedule.
- Developed REST APIs using Express.js and MySQL for environmental reporting, enabling village officials to identify illegal waste disposal locations and respond more effectively.

Skills

Programming Language: Go | PHP | SQL | TypeScript | JavaScript | Python | C++

Backend Development: Laravel | Express.js | REST API | Eloquent ORM | API Design | API Documentation

Frontend Development: Vue.js | React.js

Database: PostgreSQL | MySQL | Relational Modeling | Normalization | Indexing | Transactions

DevOps & Tools : Docker | Docker Compose | Linux | VPS Deployment | Git | GitHub

Engineering Practices: System Design | Modular Architecture | Repository Pattern | Database Migration | Debugging | Unit Testing | Load Testing | Code Review

Languages

Indonesian: Native

English: ITERA English Proficiency Test Score 540 (Intermediate working proficiency)
